

Case Study

Integrally Coloured Flood Defence Wall

Caol & Lochyside Flood Prevention Scheme (CALFPS)

PROJECT DESCRIPTION

As time progresses The Highland Council have started to defend the area at risk when it comes to flood damage and coastal erosion. Where Loch Eil meets Loch Linnhe in Scotland there is a small village called Caol, where RJ McLeod (Contractors) Ltd have been operating under the shadow of Ben Nevis to ensure the future of this village is safe from flood and water damage. HATCRETE have contributed to this flood alleviation scheme by supplying coloured and decorative concrete products, HATCRETE helping RJ McLeod create something for the local community to be proud of. The pattern imprinted into the concrete wall by RJ McLeod is complemented by the HATCRETE Smokestone Colourmix used to integrally colour the concrete, produced by Leiths and helping merge the wall into its beautiful natural surroundings.

PROJECT REQUIREMENTS

To supply 780m³ HATCRETE Smokestone Colourmix to the Leiths plant who provided the concrete for RJ McLeod for the integrally coloured concrete flood defence wall.

PRODUCTS USED

HATCRETE Smokestone Colourmix added to the concrete at the Leiths Scotland (Fort William) concrete plant during the manufacturing stage.

PARTICIPANTS

- **Client** - The Highland Council
- **Main Contractor** - RJ McLeod
- **Concrete Supplier** - Leiths
