

# Case Study

Coloured Industrial Floor  
Hardener & Sealer

## The Shed, Whitehill & Bordon

### PROJECT DESCRIPTION

East Hampshire District Council wanted to create a vibrant, welcoming hub where businesses from Bordon and the surrounding area could thrive. Nationwide Concrete Flooring was appointed to install a coloured power-floated concrete floor, helping transform The Shed into a unique entertainment and dining destination that supports local retailers and workers. The project demonstrates how HATCRETE Coloured Industrial Floor Hardener can be used with a power-floated floor to create a durable, clean, and professional finish.

The Shed was created as part of the Prince Philip Park regeneration project in Whitehill and Bordon, designed to celebrate the area's military heritage while embracing the surrounding Hampshire countryside. This latest phase of the redevelopment has quickly become a popular destination, attracting local families and visitors from across the surrounding area.

### PROJECT REQUIREMENTS

To supply HATCRETE Coffee Bean Industrial Floor Hardener and Solvent-Based Cure & Seal for a high-quality, power-floated finish across 1,300m<sup>2</sup> of concrete.
