

Technical Data - Acid Wash

04/04/2025

PRODUCT DESCRIPTION

HATCRETE Acid Wash is a dilute acid used to remove efflorescence whiteness and cement or concrete stains from plain or coloured concrete and other hard surfaces.

PURPOSE

HATCRETE Acid Wash removes efflorescence whiteness caused by excess salts from concrete surfaces including floors and precast products.

SPECIAL PROPERTIES

- Removes efflorescence caused by excess salt deposits
- Improves aesthetics of coloured concrete
- Removes excess mortar
- Removes cement stains
- Removes surface laitance
- Cleaning old (unsealed) concrete surfaces

APPLICATION INSTRUCTIONS

Prior to use, always thoroughly saturate the surface with water to prevent **HATCRETE Acid Wash** soaking into the structure. Remove any excess water and apply product in a controlled and even manner with an all plastic sprayer (never with a bucket and brush). Some fizzing will be visible. Agitate gently with a soft brush.

After 5 minutes the **HATCRETE Acid Wash** will have had an effect. Thoroughly clean the surface with a water jet or mechanical scrubber to remove the weakened material. This is of particular importance if the area is to be sealed or another coating is to be applied. A second application of **HATCRETE Acid Wash** may be required, followed by a second thorough cleaning.

Prior to commencing a full clean down, it is recommended to test a small inconspicuous area. Do not allow product to come into contact with metals such as steel, copper, aluminium and titanium. Ensure a water supply is ready to flood any accidentally contaminated areas or to wash product from body in case of any accidental splashes.

COVERAGE

Varies enormously, but 2 - 3m² per litre can be expected in most situations.

PACKAGING

5 & 25 Litre plastic jerry cans.

STORAGE

Store in a cool dry conditions and do not allow to freeze.

HEALTH AND SAFETY

Protective gloves and goggles should be worn. Do not mix with bleach or other strong alkalis. Refer to Safety Data Sheet for further information.
