

Case Study

Integrally Coloured Concrete
& Precast Walling

Residential Retaining Wall, Leicester

PROJECT DESCRIPTION

HATCRETE was proud to support Team Elite in the successful installation of a residential retaining wall in Lower Bardon, North West Leicestershire. This development required a durable, visually appealing solution that could be installed efficiently. The project involved the installation of a 150m retaining wall, utilising slate-effect precast concrete panels. Despite the scale, the full installation was completed in just over a week. The use of precast concrete panels enabled rapid onsite installation.

HATCRETE supplied Raven Grey Adcolour, which was used to integrally colour the concrete. This ensured a consistent, high-quality finish that complements the slate-effect texture and enhances the overall aesthetic of the development.

PROJECT REQUIREMENTS

To supply Raven Grey Adcolour for the colouring of the precast concrete panels.

PRODUCTS USED

HATCRETE Adcolour - Raven Grey

PARTICIPANTS

- Main Contractor – **Team Elite**
- Developer – **Davidsons Homes**
- Integral Colour Manufacturer – **HATCRETE**
